Browser (static files; nothing is sent to a server)
Physics engine (js/engine, no DOM)
Interface (js/app.js, lung.js, draw.js)
Mechanics: extended equation of motion, Rohrer resistance, viscoelastic, chest wall
Ventilator: modes, triggers, cycling, holds, adaptive control
samples
Ventilator-style screen: waveforms, loops, dials
Animated lungs, monitor, alarms
Patient: presets (normal, COPD, asthma, ARDS), effort, flow limitation, tube
Gas exchange, acid-base, haemodynamics
Learn tab, About, Model and limits
Share / learner links (setup in the URL)
Parameter file: every constant tagged [SRC] / [CALC] / [ASSUMPTION]
Scenarios and asynchrony examples as DATA (goals, actions, questions, hints)
Build, verify, publish
Automated tests (43) analytic, reference patient, scenarios
gate
GitHub: source, CI, Pages hosting
Zenodo: DOI for each release
Cloudflare analytics, Google Form feedback
